Introduction

I hold a Master's degree in Business Informatics from the University of South Bohemia in České Budějovice.

During my studies, I worked at Solirax CoreDev s.r.o., where I gained practical experience in VR development and 3D modeling.

As an intern at Bosch GmbH, I was responsible for data mining in Python and SQL-based audit processes.

Since 2024, I have been working full-time at Bosch in a multinational team, focusing on data analysis, user support, and the development and maintenance of RPA automation tools to improve internal workflows and efficiency.

As a side project, I developed a secure, role-based injury reporting application that ensures automated workflows for injury approval, editing, and archiving, while providing centralized access to the entire injury database. The system is now used in over 100 locations across the Czech Republic and Slovakia.

Experience

06/2024 - until now

Controller I.

Bosch GmbH

Working in an international team on internal process automation and support. Responsible for data analysis, RPA development and maintenance, as well as user support and internal tool improvement.

03/2023 - 05/2024

Internship

Bosch GmbH

Processing data using Python with the help of libraries numpy, pandas, and matplotlib.

Creating automated audits for data correction in T-SQL

07/2021 - 07/2022

Internship

Solirax CoreDev s.r.o.

Creating 3D models for the virtual world of NeosVR.
